ALUMINUM

Aluminum is an elastic metal in silver color. The passivation property of aluminum, which is found in the form of bauxite ore in nature, is the factor that makes it known for its superior oxidation resistance. Aluminum, which is a soft and light metal, is used in the production of many products in many sectors of the industry thanks to its high strength, and is one of the most important elements of the space and aviation industry and the transportation and construction industry. Its ability to be easily beaten, processed and cast are among the factors that increase its prevalence. It is non-toxic and non-magnetic, does not spark. Munteha Group imports Aluminum Ingot and its derivatives from various origins.

PRODUCT DETAILS

Our product range that we import and export is as follows:

ALUMINUM INGOTS A7

We do supply 20 thousand MT Aluminum A7 ingots per month with our contracts from Rusal and other important producers of the world.
